There is plenty of sparcely settled and unimproved territory in the world but, in much of it, their chance to live and prosper is slim. If, however, you count the cost in effort and wish to be more economical of your time and energy you will work out a program that will be effective. It's of no use to punish the child; no use to get angry at him. He is only doing what he had done with approval in the earlier months

Perhaps you put him on the nursery chair, use all the persuasion at your command and wait in vain Then you give up, put on his diaper and rompers and almost immediately he is wet. It looks like a bi of pure cussedness on the child's part, but it isn't. It took the pressure of the clothing to set off the voiding reflexes. Your task is to

If you can guess right on the rhythm and place him on the chair when he is most likely to void, and can keep him good natured all the while, you are on the way to victory.
